Professional Summary

Fullstack Developer with 2 years of experience in agile environments, specialized in building scalable and efficient solutions following best practices such as the SOLID principles.

In addition to my technical skills, I have a strong focus on design and usability, ensuring intuitive and attractive interfaces for a better user experience. I'm looking for new challenges where I can continue growing and contribute my knowledge in web and backend development.

Work Experience

Aug 2022 – **Fullstack Developer**, *Baufest*, Montevideo, Uruguay

Apr 2024

Internal Logistics System – D&C Logistics

- Implemented key improvements to optimize workflows and add new features.
- Built responsive components using Angular and Bootstrap.
- Developed backend with .NET following SOLID principles and Clean Architecture.
- Created RESTful services and optimized SQL Server queries.
- Used Git, TeamCity and Octopus for version control and deployment.

Internal Betting System – Qatar 2022 World Cup

- Developed an app used by 400+ employees to make predictions and friendly bets.
- Built a dynamic and intuitive frontend with React.
- Created backend logic in .NET and managed real-time data with SQL Server.
